

TekniaGreek™ Keyboard Layout (Macintosh)

Each key can create up to four Greek characters

1. Upper left is the capital letter. Identical on Macintosh, Windows, and the Web.
2. Lower left is the lowercase letter. Identical on Macintosh, Windows, and the Web.
3. Upper right is the capital letter with the option key held. Only available on the Macintosh.
4. Lower right is the lowercase letter with the option key held. Only available on the Macintosh.

The accents on keys 1 to 6 and the breathing marks on the += key do not back up over the previous letter. Most of the accents listed above on the right side of the key are the specialty accents for narrow vowels (ε and ι). See the other pdf, "TekniaGreek Accent Mapping (Macintosh)" for specifics.
